

INSTRUCTIONS FOR USING **BLACK TAC** OINTMENT

On arrival allow the tub to stand and settle before opening

(In warmer conditions **Black Tac** can become semi-fluid.)

Because of our wet climate, muddy conditions can cause cracks and weeping sores to break out on horses' heels and fetlock. **Black Tac** forms a protective barrier over the affected area helping it to dry out and heal. A compound of high quality natural ingredients, **Black Tac** is water soluble and safe to use on all skin lesions.

1. Ensure hands are clean and dry before applying **Black Tac**, and you may prefer to use disposable gloves.
2. Clean the affected area by wiping before applying **Black Tac**. (e.g. using paper towels)
3. If you have to wash the affected area then allow it to dry thoroughly before applying the first layer of **Black Tac**.
4. Do not wash in between applications but wipe clean and re-apply. Dispose of all wipes / paper towels hygienically.
5. If you have to wash for any reason then follow 3 above.
6. Apply twice daily when treating existing problems.
7. For maintenance and prevention a daily application to frog and heels is recommended.
8. In the colder months **Black Tac** can become very stiff – just bring into a warm room or stand in a bowl of warm water. (Do not allow any water to get into the ointment).
